

A Metasummary of Published Qualitative Research on Pregnancy and Resettlement Among Refugee Women

Diana M. Kingsbury, MA, MPH Sheryl L. Chatfield, CTRS, PhD TQR 2017

Elements of this presentation

The study

- Background
- Methods
- Results
- Themes
- Conclusions
- Public Health Implications

Method details

- Value of qualitative meta study
- Alternative approaches
- Key components of the approach used
- Challenges

Background

Why do qualitative metastudies?

- Identify, aggregate, organize, (sometimes) quantitize findings from previous qualitative research
- Increase accessibility/usability/appreciation of prior research efforts
 - Integration of key findings
 - Identification of commonalities/themes
 - Develop practice guidelines
 - Enhance/ contextualize/personalize recommendations from quantitative integrated research

Methods

- Systematic search
- Integrating multiple qualitative studies
 - Options include: Noblit & Hare; Paterson et al., CERQual, & others
 - ****Qualtitative metasummary (Sandelowski & Barroso, 2007)***
- Quality assessment conducted using CASP (Critical Appraisal Skills Program)
- Coding and extraction of themes conducted using Dedoose® web-based software

Search Strategy

- Search terms: pregnancy, resettlement, refugees, qualitative research, maternal health, health beliefs
- Databases: Academic Search Complete, EBSCO, CINAHL, PubMed, PsycInfo, Google Scholar
- Reference lists of eligible articles were also searched

Initial literature review: N = 60

Search Strategy

Screening for eligibility: N = 32

Duplicates removed: N = 10

Articles included in CASP assessment: N = 22

Additional articles included during CASP assessment: N = 1

Total number articles assessed: N = 23

Excel version of CASP assessment form

Challenges

- Sample selection
 - Degree of relevance to subject matter
 - Extractable findings
- Ratings
 - Use of theory
 - Was there a 'design?'
 - Coherence
 - Striving for consensus vs. taking advantage of unequal balance of power
- Limitations of rating form
- Process issues
 - Conversion of older publications

Results

 Articles focused on: pre- and post-natal care, caesarean birth, post-partum depression, interaction with healthcare providers, access to healthcare, female circumcision

CASP Inter-Rater Agreement: 0.56 (sd = 0.25)

• Quality: 11 of 23 articles classified as at least "good" quality

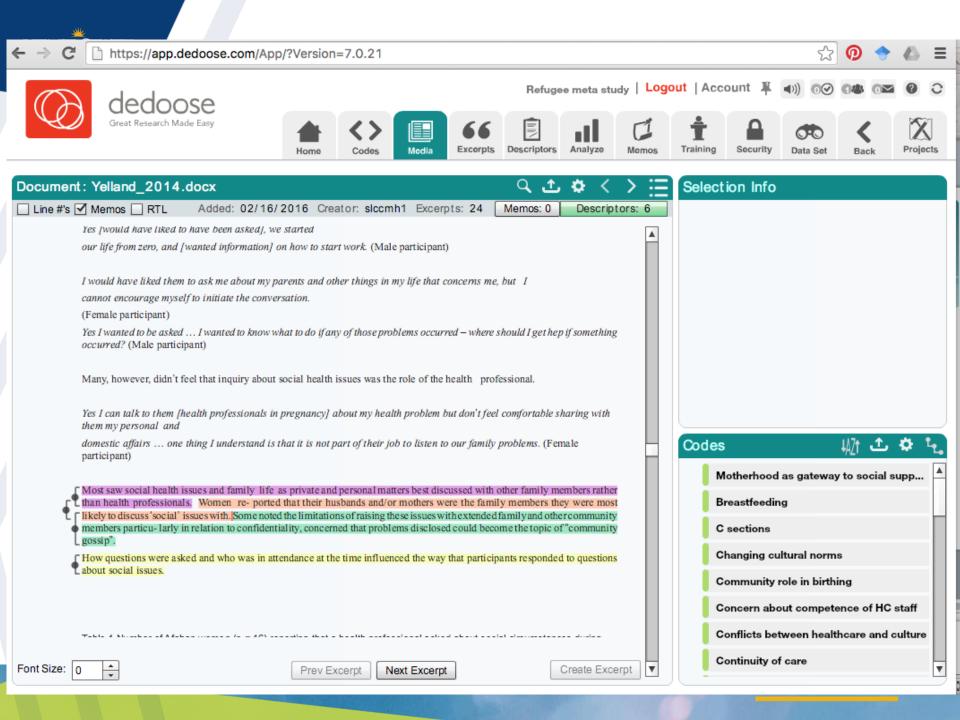

Results

- Theme creation/development:
 - Articles were imported into Dedoose® and matched to selected descriptors
 - Articles then reviewed and initial codes were developed from finding excerpts*
 - Descriptive themes were created from clusters of like codes
 - Themes were developed and validated by reviewing context of original excerpt

*finding excerpt = assertion made by authors of source articles based on their data

Descriptors

Country of resettlement: Sweden, U.S., Greece, Canada, U.K., Australia

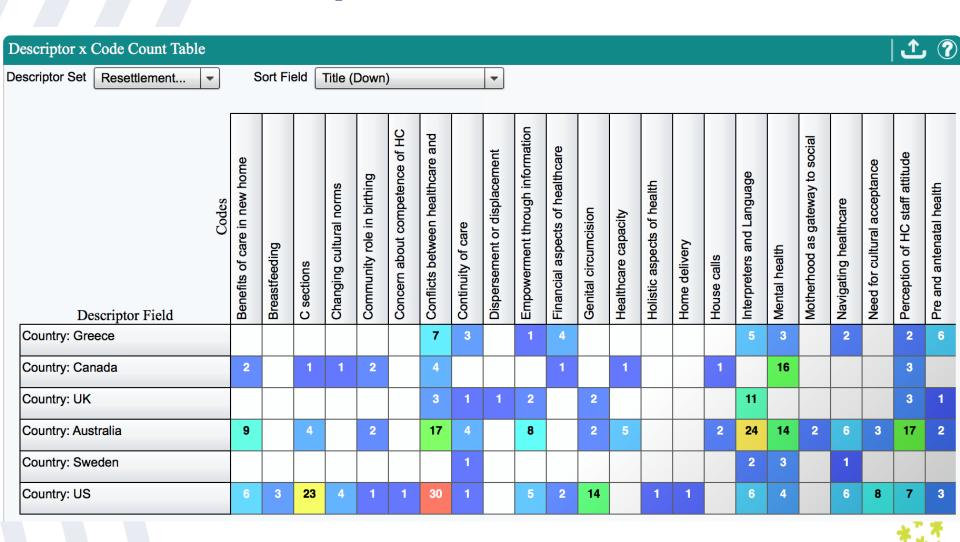

Country/Region of origin: Somalia, Afghanistan, Burma, Middle East, or Multiple

Data collection method used: Individual interviews, group interviews, focus groups

Quality: Fair or poor, Good or better

Descriptor table from Dedoose

Themes

- Obstacles
- Seeking congruence
- Encouraging resettlement

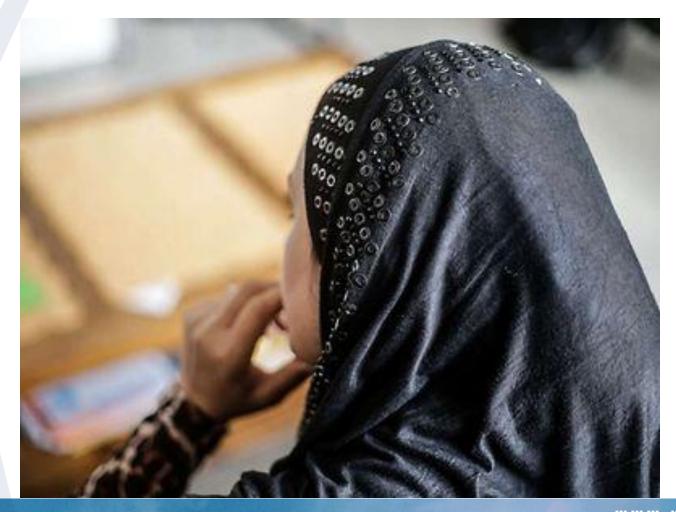

Themes: Obstacles

Themes: Seeking Congruence

Themes: Encouraging Resettlement

Recommendations for Practice

Conclusions

- Codes were primarily derived from articles classified as "good" quality
- Majority of articles focused on African/Somalis refugees
- Summarized results suggest pregnancy is an uncertain time in the lives of resettled refugees
- Results also suggest opportunities for improving the pregnancy experience of refugees

Public Health Implications

- Potential role for healthcare practitioners to promote social connectedness among resettled refugees during pregnancy
- Rethinking cultural competence and considering clinical interventions in light of culture
- Opportunity to mobilize lay health workers
- Assessment of findings in light of current refugee crisis
