

## Job Description

Oversee the work of qualitative and mixed methods data management activities for a funded research grant within the Department of Nursing Research and Evidence-Based Practice. Work with members of the Qualitative and Mixed Methods Data Center research team to develop, implement, and maintain comprehensive qualitative databases and files related to the Center. Provide support to the Qualitative and Mixed Methods Data Center to facilitate the achievement of the program's goals.

Post baccalaureate research experience or graduate degree in related field.  
Experience with research program management in health care related research or educational environment strongly preferred.  
Prior experience in qualitative research data management and analysis required  
Prior work with clinical research in maternal-child health, research methods, or patient care preferred.  
Sufficient knowledge of the program study area preferred.  
CITI (Research Ethics and Compliance) training required within one month of employment.  
Excellent oral, interview, and written communication skills.  
Strong critical thinking, problem solving and attentiveness to detail.  
Strong organizational and computer skills. Experience with Excel and qualitative database programs.
